

## You need one counter to play this game.

The first player puts it on one of the circles and says that number.

The second player now slides the counter along a straight line to another circle, and adds that number onto the first player's number and says what the total is.

The first player then slides the counter (along a straight line) to another circle and adds on that number.

So you carry on, taking it in turns and keeping a running total.

The player who gets the total to be exactly 17 is the winner.

If your score goes over 17 - YOU LOSE!

# The Bottle Bank's Mouth

Two players, one is Bertie Bottle Bank, and the other is Jane Jar.

Take it in turns to put counters on the board; only one is allowed on each number. As each number is covered, it is added to the total, which you keep between you.

You each try to make the total add up to 31 - and the player who does so is the winner.

If you make the total come to more than 31 then you lose.

If Bertie Bottle Bank wins he will recycle Jane Jar.  
If Jane Jar wins...
